**WSC Transmission Control Protocol
(TCP)/Internet Protocol (IP) Data Interface
Service Capability (WDISC)
Handbook
for
Desktop Development and
Implementation, and System
Tools and Maintenance**

May 28, 2003

Effective: May 28, 2003

Contract NAS9-98100

DATE: June 29, 2004

TO: Distribution

FROM: SGT/NENS Documentation

SUBJECT: DCN 002 to WDISC Handbook for Desktop Development

Attached is DCN 002 to the WDISC Handbook for Desktop Development and Implementation, and Systems Tools and Maintenance document. This DCN is a result of an addition of a WDISC diagram in Section 1; an update to procedure 2.1, Desktop Development; an update to procedure 3.2, Notification to Customer of WDISC Operational Support; addition of a configuration management procedure in Section 5; a WDISC user addition (Landsat-7), resulting in an addition/change to Appendix C; and the deletion of references to the HP Scheduler including Appendix E. The DCN 002 copy of the document can be found on the Online Library and WDISC Web site. This can be downloaded and printed out.

Preface

The purpose of this document is to provide procedures for the ongoing development and implementation of the White Sands Complex (WSC) Transmission Control Protocol (TCP)/Internet Protocol (IP) Data Interface Service Capability (WDISC) system at the Goddard Space Flight Center (GSFC) Network Integration Center (NIC).

This document is under configuration management of the Goddard Space Flight Center Network Control Center (NCC) Miscellaneous Systems (NCCMS) Sustaining Engineering Review Board (SERB).

This document is available online via the Online Library at:
<https://edims.honeywell-tsi.com/>

Access to the document also is available via the WDISC Web site at:
<http://ncc.gsfc.nasa.gov/syseng/wdisc/doc.htm>.

This document will be changed by Documentation Change Notice (DCN) or complete revision.

Proposed changes to this document must be submitted to the WDISC SERB along with supportive material justifying the proposed change.

Comments or questions concerning this document and proposed changes shall be addressed to:

John Groom

Section 1. Introduction

1.1 Purpose

The White Sands Complex (WSC) Transmission Control Protocol (TCP)/Internet Protocol (IP) Data Interface Service Capability (WDISC) supports customers who require TCP/IP access to the WSC for telemetry and command processing. Support is provided from the National Aeronautical and Space Administration (NASA) Integrated Services Network (NISN) Closed IP Operational Network (IONET), using a defined set of authorized addresses. Below is a partial list of WDISC supported customers:

- a. New Millennium Program Earth Orbiter –1 (NMP/EO-1).
- b. Gravity Probe-B (GP-B).
- c. Far Ultraviolet Spectroscopic Explorer (FUSE).
- d. Long Duration Balloon (LDB).
- e. Ultra Long Duration Balloon (ULDB).
- f. Thermosphere Ionosphere Mesosphere Energetics and Dynamics (TIMED).
- g. Solar Radiation and Climate Experiment (SORCE).
- h. Galaxy Evolution Explorer (GALEX).
- i. Swift.
- j. Landsat-7.

1.2 Scope

This document defines the procedures used in desktop development, and implementation of new WDISC customer elements at the Network Integration Center (NIC) as well as system tools and maintenance.

1.3 WDISC Desktop Development Team

1.3.1 Desktop Developer

To process customer data through the WDISC, the Desktop Developer develops customer desktops with accompanying desktop drawings. The Developer uses Programmable Telemetry Processor (PTP) application software as well as project related documentation (DMRs, etc.)

1.3.2 Desktop Tester/Customer Coordinator

The WDISC Desktop Tester/Customer Coordinator interfaces with the customer by establishing agreements, familiarizing customer with WDISC operations and desktop setup, tests developed desktops and coordinates desktop transfer to operations.

1.3.3 WSC Data Base Administrator

The WSC Data Base Administrator (DBA) configures the Network Control Center Data System (NCCDS) database for the addition of WDISC customer desktop mapping for the scheduling of customer data throughput.

1.4 Customer-Developer Coordination

Prior to development of project desktops the WDISC Desktop Developer coordinates with project management and engineering personnel to obtain requirements and documentation, (e.g., Detailed Mission Requirements [DMR] and Interface Control Documents [ICD]).

1.5 WDISC System Overview

- a. The WDISC system is located at the NIC (development) and the White Sand Complex (WSC) (operations). The operational system consists of 8 PTPs with each PTP containing three boards. Monitor and Control (M&C) workstations are located at the NIC and WSC. Scheduling is accomplished via the NCCDS at WSC. See Figure 1-1, WDISC Configuration Diagram, and Figure 1-2, WDISC Architecture with Expansion PTPs 3 and 4.
- b. The GSFC Network Integration Center (NIC) contains a WDISC workstation for development and testing purposes. A PTP configuration maintenance unit is located in the NIC for use by the WDISC Development Team for entering configuration data.
- c. GSFC Building 25, Room N171, provides a backup facility for the NIC in the event of an evacuation of Building 13. This backup facility has a WDISC workstation for development and testing purposes.

RTN LI "Q" (W56)

FWD LI "L" (W32)

Figure 1-2. WDISC Architecture with Expansion PTPs 3 and 4

Section 2. Development Procedures

2.1 Desktop Development

2.1.1 Purpose

This procedure describes the method for developing project desktops.

2.1.2 Participants

- a. WDISC Desktop Developer.
- b. Project.

2.1.3 Procedure

When creating desktops for a new WDISC customer project, the WDISC Desktop Developer uses the PTP application software to form a data processing structure based upon a variety of mission requirement and PTP software knowledge. The developer should perform the following items:

- a. Prior to developing desktops for a new project, the Desktop Developer must obtain all of the documentation that is available at that current stage of the project's development. A dialog should also be started with the customer to define project requirements, understanding changes planned, but not documented in ICDs, DMRs, etc.
- b. The developer needs to determine if the customer will use the open or closed IONet and prepare a firewall rule set for the various stages of desktop testing and MOC interface verification checks.
- c. Determines the processing functionality needed in the Command, Telemetry and Command Switch desktop streams.
- d. Provide the AB command switch escape sequences to the customer. The switch must be set to A when spacecraft commands are to be processed by PTP1 or PTP3. The switch must be set to B when spacecraft commands are to be processed by PTP2 or PTP4. The escape sequences are as follow:

To throw switch to A = hex: 1B 53 4E 31 41
ASCII: Esc S N 1 A

To throw switch to B = hex: 1B 53 4E 31 42
ASCII: Esc S N 1 B

- e. Contacts the Mission Operations Center (MOC) to obtain TLM test data to check out the new desktops and MOC interface. Prepare the test data for use with the test desktop.

- f. Determine if forward data code conversion (for example, from NRZ-L to NRZ-M) is needed and modify the command serial output as needed.
- g. Determines if a clamped or toggle idle pattern is needed.
- h. Determines if Reed-Solomon (R-S) error correction is needed. Set the Interleave, Fill, accept correctable R-S frames, and accept uncorrectable R-S frames parameters to meet mission requirements.
- i. Determine if de-randomization is needed.
- j. Determine if either the R-S and/or the frame synchronization pattern are to be stripped from the telemetry stream.
- k. Establish the IP addresses and port numbers that are acceptable to both the WDISC and MOC systems.
- l. Confirm the Space Network (SN) command data rates.
- m. Build operational and test desktop(s) along with drawings that depict the data processing sequence for each desktop. See Appendix B for desktop drawings. Use either Mission supplied test data or PTP generated simulation data to verify proper operation of the desktops. Use two development machines to confirm error free data flow and that the correct interface protocol is used.
- n. Build a post-pass data playback desktop.
- o. Update the master archive with desktops, drawings data, and documents applicable to the mission. The master archive is kept by the WDISC Desktop Developer at Goddard Corporate Park (GCP).
- p. Install and write-protect the desktops and data onto the WDISC system.
- q. Provide a copy of the desktop drawings to the WDISC test team. Convert the Visio drawings (remove any IP address references) into a Word document and e-mail it to the customer and other interested parties as needed (Compatibility Test Van [CTV] etc.). Hand-carry a copy of the original drawing files to the desktop tester.
- r. Develop TLM data files.

2.2 Transfer of Developed Desktops and Data Sets to WSC

2.2.1 Purpose

This procedure provides the steps normally taken to transfer developed desktops and data sets from the NIC WDISC Maintenance computer to the WSC PTP systems.

2.2.2 Participants

- a. WDISC Desktop Developer

2.2.3 Procedure

2.2.3.1 Preparation

Prepare the developed desktops and data by grouping (zipping) them together into a single file (this preserves their time stamp identity and simplifies the transmission process by sending a single file). The zip files can then be sent by FTP to one or all WSC machines.

2.2.3.2 File Transfer

For file transfer perform the following steps:

- a. Log into the WDISC Maintenance PC and place the zip file, to be sent to WSC PTP systems, into a local folder.
- b. Select the configuration file to run the local Remote Administrator (Radmin) client application for the selected PTP.
- c. Transfer the Local System zip data to the Remote System ncc\jb folder (a password is required) on the selected PTP.
- d. Start the remote control program on the Maintenance PC.
- e. Click the NT Explorer icon on the selected PTP (through the remote control display).
- f. Use NT Explorer to open the D:\lnet pub\ftproot\ncc\jb folder and delete any old files.
- g. Extract (unzip) the new files from the transferred zip file into the jb folder.
- h. Create a new mission folder (if one is not present) under the D:\lnet pub\ftproot\ncc\ path and move the extracted mission desktops and data from the jb to the mission folder. Extract any further mission zip files into the mission related folder.
- i. Copy the new desktop files to the desktops folder on the C drive (C:\ptp_user\Desktops) to make them available for operational use. Data files should be copied to the C:\ptp_user\Logs folder.

- j. Repeat steps b through i to transfer files to other Second TDRS Ground Terminal (STGT) and White Sands Ground Terminal (WSGT) PTP systems.

2.3 PTP Testing with Project Customer

2.3.1 Purpose

This procedure describes the method to test developed desktops to ensure correct operational data transfer through the PTPs.

2.3.2 Participants

- a. WDISC Desktop Tester.
- b. Project MOC.
- c. Mission Commitment Manager (MCM).
- d. Mission Commitment Engineer (MCE).

2.3.3 Procedure

2.3.3.1 PTP Test

2.3.3.1.1 General

This test verifies the WDISC/PTP configuration and connectivity between WDISC PTP and customer MOC, and the ability of the customer to failover from primary to backup PTP.

2.3.3.1.2 PTP Pre-test

Prior to testing the desktop, the tester obtains from the customer the test plan rule and set information for IONet usage. Re-verify whether the customer will use open or closed IONet. Verify desktop files are in the PTP and drawing files have been obtained from the developer and that the telemetry data file (if required) is on hand.

2.3.3.1.3 Testing

- a. Coordinate with the MOC a date and time for the test.
- b. Issue a Briefing Message (BM). See Figure 3-1 for sample briefing message.
- c. Verify IP connectivity between PTP and MOC, prime and backup. Do this for each ground terminal (STGT and WSGT).
- d. Develop PTP board assignment.
- e. Have MOC transmit test command data to each PTP.
- f. Verify MOC can activate Command select switch for Prime and Backup PTPs.
- g. Flow telemetry test data to the MOC through both PTPs at each ground terminal. Test ground terminals one at a time.
- h. Repeat connectivity for each PTP board.

2.3.3.1.4 Post-Test

Prepare test results report and send to the WDISC Desktop Developer, project, NASA MCM and MCE. Coordinate via e-mail needed changes to desktops with Desktop Developer. Retest updated desktops. Report results to Desktop Developer, etc.

2.3.3.2 Test Results Report

At the conclusion of each test a report is generated and sent to the WDISC Desktop Developer, Project MOC, MCM, MCE, and the WSC test group. See Figure 2-1, Test Results Report Sample.

NCC Network Test Report #5389 - Initial Distribution
Test Date: 03/13/03 Request Date: 03/06/03 Report Date: 03/13/03
Report Type: Test Test Category: Space Network(SN) Test
From: K. CHAMBERS
Test Start DOY: 72 Z-Time: 1500Z Test End DOY: 72 Z-Time: 1700Z
Ground Station(S): STGT
Mission/Project: Customer
Briefing Message(s) DTG: 12/1212Z MAR 2003
Test Title: Customer/WDISC Data Flow
Participants: NIC, Customer MOC, NISN, STGT/WSGT
Test Objectives:
Verify command, telemetry data flow, and command switch/failover
capability between the SN WDISC and Customer MOC.
Results: Objective Partially Met
Summary and Remarks:
Testing was conducted using STGT PTP 1 and 2. Telemetry data flow
was successful however, we were unable to establish socket
connections for command data and the failover switch. The MOC
suspects a software problem in the MOC. A rerun will be scheduled
in the near future.

Figure 2-1. Test Results Report Sample

2.4 End-to-End Test Procedure

2.4.1 Purpose

This procedure describes how to conduct an end-to-end test to verify the interface from WSC into the PTP.

2.4.2 Participants

- a. WDISC Desktop Tester.
- b. Project MOC.
- c. WSC.

2.4.3 Procedure

2.4.3.1

After successful PTP test, the WDISC Desktop Tester performs an End-to-End (E-T-E) Test using the Radio Frequency Simulations Operations Center (RFSOC), CTV, Simulation or the customer spacecraft to verify the interface from WSC into the PTP. The E-T-E Test using command data is performed with each ground terminal. After successful command testing, the tester performs a reverse test using telemetry data on the return link. This test is also performed with each ground terminal. For complete verification of system performance in the E-T-E Test, the WDISC Desktop Tester must perform a full (command and telemetry) test with the customer spacecraft. See Figure 2-2, Customer E-T-E Test Sample Briefing Message.

2.4.3.2

At the completion of the test the WDISC Desktop Tester prepares and distributes a Test Results Report to the WDISC Desktop Developer, Project MOC, MCM, MCE, and the WSC test group. See Figure 2-1.

BRIEFING MESSAGE FOR THE Customer SPACECRAFT END TO END TEST.

1. THE Customer SPACECRAFT END TO END TEST IS SCHEDULED ON
FEBRUARY 11, 1999 FROM 1635 TO 2100Z.

2. PARTICIPANTS:

NCC, STGT, NISN, FDF, CTV, Customer SPACECRAFT I&T, Customer SCC.

3. OBJECTIVES:

THE TEST OBJECTIVES ARE TO VERIFY:

- A. THE CAPABILITY OF THE SN TO SUPPORT Customer REQUIRED SERVICES.
- B. WDISC FORWARD AND RETURN LINK DATA INTERFACES BETWEEN THE
Customer SCC AND STGT.
- C. THE CAPABILITY OF THE SN TO ACQUIRE THE Customer SPACECRAFT RECEIVER
WITH A TDRS FORWARD LINK CONFIGURED IN THE GN MODE.
- D. THE CAPABILITY OF THE Customer SCC AND SN TO TRANSMIT COMMAND DATA
TO THE Customer SPACECRAFT.
- E. THE CAPABILITY OF THE Customer SCC TO RECEIVE AND PROCESS SPACECRAFT
TELEMETRY DATA FROM THE SN.

4. TEST DESCRIPTION:

- A. TDRSS FORWARD AND RETURN LINK SERVICES HAVE BEEN SCHEDULED
FOR RF TRANSMISSION TO/FROM THE Customer SPACECRAFT VIA FIBER
OPTIC LINK AND CTV AT BUILDING 25.
- B. CTV WILL ORIENT THE CTV ANTENNA POINTING FOR RF TRANSMISSION
TO TDRS SPARE (TDRS-1).

Figure 2-2. Customer End-To-End Test Sample Briefing Message

- C. Customer SPACECRAFT I&T WILL CONFIGURE THE SPACECRAFT TO PROVIDE FORWARD AND RETURN LINK RF I/F WITH TDRSS VIA THE FIBER OPTIC LINK AND CTV.
- D. CTV/STGT/ Customer I&T WILL PERFORM FORWARD AND RETURN LINK C/NO MEASUREMENTS.
- E. Customer SCC WILL RECEIVE/PROCESS/VERIFY RETURN LINK SPACECRAFT TELEMETRY DATA VIA THE SN.
- F. Customer SCC WILL TRANSMIT COMMAND DATA TO THE SPACECRAFT VIA SN.
- G. NCC WDISC ENGINEERS WILL CONFIGURE THE STGT WDISC PTP TO:
 - RECEIVE FORWARD LINK DATA FROM THE Customer SCC AND SEND THE DATA TO THE STGT FORWARD LOCAL INTERFACE PORT.
 - RECEIVE RETURN LINK DATA FROM THE STGT LOCAL INTERFACE PORT AND SEND THE DATA TO THE Customer SCC.
- H. STGT WILL CONFIGURE THE GN COMMAND EQUIPMENT/FORWARD LINK TO:
 - RECEIVE COMMAND DATA FROM THE WDISC PTP/FORWARD LINK LOCAL INTERFACE PORT AND INPUT TO THE GN COMMAND EQUIPMENT.
 - MODULATE THE COMMAND DATA ONTO THE 16 KHZ SUBCARRIER.
 - MODULATE THE 16 KHZ SUBCARRIER ONTO THE TDRS FORWARD LINK.
 - TRANSMIT THE FORWARD LINK TO THE Customer SPACECRAFT VIA TDRS 4/CTV.
- I. STGT WILL RECEIVE SPACECRAFT/RETURN LINK DATA FROM CTV AND INPUT THE DATA TO THE RETURN LINK LOCAL INTERFACE PORT/WDISC PTP FOR TRANSMISSION TO Customer SCC.
- J. Customer I&T/CTV/STGT WILL VERIFY FORWARD LINK SWEEP, ACQUISITION THRESHOLD AND EVALUATE THE LINK PERFORMANCE.

5. TIMELINE:

DAY/START-STOP	ACTIVITY
FEB 11, 1999	
042/NORMAL TRANSMISSION	SHO, SV, NES, SKED TRANSMISSION
042/1605-1635Z	COMM ACTIVATION AND BRIEFING
1 042/1635-2100Z TDS, SA-2 H21, I21, T21	8 KBPS RTN TELEMETRY DG2 TYPE 1 CMD 2KBPS, RCP, SUPIDEN A5657EE
042/2100-2110Z	DEBRIEFING

6. NCC REQUIREMENTS:

- A. NCC WILL BUILD SHO'S AND SCHEDULE SN EVENTS PER THE TEST TIMELINE.
- B. TRANSMIT SHO'S AND SV TO STGT AT NORMAL TRANSMISSION TIME.
- C. NCC WILL TRANSMIT GCMR'S AS REQUIRED.
- D. CONFIGURE THE WDISC SYSTEMS TO PROVIDE FORWARD AND RETURN LINK DATA TRANSMISSION TO/FROM STGT. PTP ONE BOARD ONE WILL BE USED.

Figure 2-2. Customer End-To-End Test Sample Briefing Message, Cont.

- E. CONFIGURE WDISC SYSTEMS TO SEND Customer RETURN LINK TELEMETRY DATA TO THE Customer SCC.
 - F. RECORD THE SPACECRAFT TELEMETRY DATA.
 - G. CONFIGURE WDISC SYSTEMS TO RECEIVE COMMAND DATA FROM THE Customer SCC AND SEND THE DATA TO THE SN FORWARD LINK.
 - H. SEND RECORDED SPACECRAFT TELEMETRY DATA TO THE Customer SCC VIA FTP IF REQUESTED.
7. STGT REQUIREMENTS:
- A. SUPPORT PER THE TEST TIMELINE.
 - B. REFER TO PARAGRAPH 4.
 - C. STGT WILL CONFIGURE THE FORWARD LINK EIRP TO 48.5 DBW PER LOCAL TSI.
 - D. PROVIDE RETURN LINK C/NO MEASUREMENTS.
 - E. MONITOR RETURN LINK CW AND ASSIST WITH ANTENNA POINTING/CALIBRATION.
 - F. MONITOR RETURN LINK DATA TRANSMISSIONS AND PROVIDE SPECTRUM PLOTS IF REQUESTED.
 - G. PROVIDE EB/NO READINGS WHEN REQUESTED.
 - H. PROVIDE A GN TDRSS FORWARD LINK.
 - I. PERFORM FORWARD LINK SWEEP, ACQUISITION, AND THRESHOLD TESTS WITH Customer I&T.
 - K. FORWARD LINK PORT IS J (W30), RETURN IS P (W55).
 - L. ASSIST WITH TROUBLESHOOTING IF REQUIRED.
8. CTV REQUIREMENTS:
- A. SUPPORT PER THE TEST TIMELINE.
 - B. ORIENT THE CTV ANTENNA FOR RF TRANSMISSION TO TDRS EAST (TDRS-1 AT 49 DEGREES WEST LONGITUDE).
 - C. PROVIDE FORWARD AND RETURN LINK RF INTERFACE BETWEEN CTV AND THE Customer SPACECRAFT VIA FIBER OPTIC INTERFACE.
 - D. MONITOR TEST ACTIVITIES AND ASSIST WITH TROUBLESHOOTING IF REQUIRED.
 - E. NOTIFY THE GTD OF ANY PROBLEMS OR ANOMALIES ENCOUNTERED.
9. Customer SPACECRAFT I&T REQUIREMENTS:
- A. SUPPORT PER THE TEST TIMELINE.
 - B. CONFIGURE THE SPACECRAFT TO SUPPLY FORWARD AND RETURN LINK RF TO CTV AT BLDG 25 VIA THE FIBER OPTIC LINK.
 - C. ON REQUEST CONFIGURE THE SPACECRAFT RETURN LINK TO CW FOR C/NO MEASUREMENTS.
 - D. CONFIGURE THE SPACECRAFT FOR RETURN LINK TELEMETRY DATA TRANSMISSIONS TO Customer SCC VIA CTV AND TDRSS.
 - E. CONFIGURE THE SPACECRAFT TO RECEIVE COMMANDS FROM THE Customer SCC VIA CTV AND TDRSS.
 - F. VERIFY PROPER COMMAND AND TELEMETRY DATA TRANSMISSION BETWEEN THE SPACECRAFT AND Customer SCC.
 - G. ASSIST WITH TROUBLESHOOTING IF NECESSARY.
 - H. REPORT ANY PROBLEMS OR ANOMALIES TO THE GTD.

Figure 2-2. Customer End-To-End Test Sample Briefing Message, Cont.

10. Customer SCC REQUIREMENTS:

- A. SUPPORT PER THE TEST TIMELINE.
- B. AT COMM ACTIVATION TIME CALL GSFC VOICE CONTROL ON THE TELEPHONE (301-286-5471) AND REQUEST VOICE CONTROL TO ADD (CONNECT) THE CALL TO THE Customer TEST COORD.
- C. CONFIGURE SCC SYSTEMS TO RECEIVE Customer SPACECRAFT TELEMETRY DATA FROM THE SN VIA THE WDISC SYSTEM AND ISDN DATA LINE.
- D. VERIFY QUALITY OF TELEMETRY DATA.
- E. CONFIGURE SCC SYSTEMS TO TRANSMIT COMMANDS TO THE Customer SPACECRAFT VIA ISDN DATA LINE, WDISC, AND THE SN.
- F. VERIFY WITH Customer I&T PROPER RECEIPT AND PROCESSING OF COMMAND DATA AT THE Customer SPACECRAFT.
- G. NOTIFY THE GTD OF ANY PROBLEMS OR ANOMALIES ENCOUNTERED.

11. NISN REQUIREMENTS:

- A. VOICE: TEST COORD - NCC, STGT, NISN, CTV, Customer SPACECRAFT I&T, Customer SCC (VIA TELEPHONE)

- B. DATA:

COMMAND AND TELEMETRY DATA TRANSMISSION BETWEEN STGT AND Customer SCC WILL BE VIA WDISC, IONET AND Customer ISDN DATA LINE

12. FDF REQUIREMENTS:

- A. PROVIDE THE NCC WITH THE FOLLOWING VECTORS PRIOR TO TEST START FOR TRANSMISSION TO STGT:

TEST	SV TYPE	EPOCH TIME	COORDINATES	SIC/VIC
Customer	08	042/0800Z	RFSOC	5657/01

- B. PROVIDE INP'S TO CTV VIA EMAIL FOR TDRS-1 (49 DEG WEST) FOR DAY 042.

CTV EMAIL ADDRESS IS:

CTV@POP500.GSFC.NASA.GOV

- C. PROVIDE POST TEST ANALYSIS OF TRACKING DATA IN ACCORDANCE WITH STANDARD FDF REQUIREMENTS AND PROCEDURES.

13. REPORTS:

- A. THE GTD WILL CONDUCT A DEBRIEFING WITH ALL ELEMENTS BEFORE TERMINATING THE TEST.
- B. THE GTD WILL PROVIDE THE MM/452.1 WITH A DETAILED TEST RESULTS REPORT. THE GTD WILL ENSURE ALL PERTINENT DOCUMENTATION (TTR'S TRR'S, ETC,) IS PROVIDED TO THE MM.

2.5 Updating NCCDS for New Desktop Scheduling

2.5.1 Purpose

This procedure describes the process for updating the NCCDS with new WDISC desktop mapping and verifying it is ready for operational support.

2.5.2 Participants

- a. WSC DBA.
- b. WDISC Desktop Tester.
- c. WDISC Desktop Developer.
- d. Project MOC.

2.5.3 Procedure

2.5.3.1 Forwarding of Desktop Information for NCCDS

After the new desktop has been verified and certified by the Project MOC, a Project Data Sheet (see Figure 2-3 and Appendix C), completed by the WDISC Desktop Tester/MOC, and Desktop Configuration Parameters file (see Figure 2-4 and Appendix D), prepared by the Desktop Developer are forwarded by the WDISC Desktop Tester to the WSC DBA as a Data Base Change Request (DBCR). The WDISC DBA maps the desktop into the WDISC Scheduling database tables and verifies the NCCDS database configuration for operations.

2.5.3.2 NCCDS Scheduling Test

To verify that NCCDS is correctly configured to support the new desktops the WDISC Desktop Tester coordinates with the project MOC to conduct an NCCDS Scheduling test by submitting a schedule for each new desktop. See procedure 2.6 for coordination with WSC for testing with WDISC systems.

2.5.3.3 Verification that PTP Server Reads Correctly to NCCDS

The WDISC Desktop Tester monitors the PTP to ensure the server responds correctly to schedule requests from the NCCDS and verifies scheduled events are correctly reported in NCCDS PTP Events report. The WDISC Desktop Tester notifies the WSC DBA that the new desktops were successfully tested.

2.5.3.4 Verification of NCCDS is Ready for Verification Testing

After verification that the NCCDS can support new desktop names, the WSC DBA then forwards a Data Base Change Notice (DBCN) to the WDISC Desktop Tester, WDISC documentation support, the WDISC SERB, and the MOC.

2.5.3.5 Creation of Project Data Sheet

Upon receipt of the DBCN, documentation support will request the DBA to e-mail WDISC Mapping, and Parameter Reports to develop the project data sheet.

2.6 Coordination with WSC for Testing/Development Work with WDISC Systems

2.6.1 Purpose

This procedure describes the method for coordinating with WSC when testing/development is needed with the WDISC system.

2.6.2 Participants

- a. WDISC Desktop Tester/Desktop Developer.
- b. WSC SN Scheduler.
- c. WSC Test/Operations Personnel.

2.6.3 Procedure

- a. Prior to commencing test/development work on WDISC systems, the WDISC Desktop Tester/Developer will contact the WSC SN Scheduler to determine WDISC system availability.
- b. The Scheduler will check the WDISC schedule and verify its availability.
- c. The Scheduler will contact WSC Test/Operations personnel and notify them of the request. The Test and Operations personnel will confirm with scheduling whether or not systems are available. The Scheduler will notify tester/developer of availability.

Section 3. Transition to Operations

3.1 Verification of MOC Ability to Flow Data and Operate with WSC

3.1.1 Purpose

This procedure verifies the ability of the MOC to operate through the WSC and ground terminals.

3.1.2 Participants

- a. WDISC Desktop Tester.
- b. Project MOC.
- c. WSC.

3.1.3 Procedure

- a. The WDISC Desktop Tester prepares a briefing message (see Figure 3-1), and facilitates testing to determine whether the Project MOC is able to schedule and receive data via the WDISC. The tester will arrange for scheduling via the UPS, SWSI, or manual mode (via e-mail schedule request message) whichever matches the MOC's requirements.
- b. The tester observes the test and the Project MOC's performance.
- c. Post-test, the tester provides the Project MOC with detailed comments/test report and determines if further testing is needed.

AMS003A 071:12:22:23 Wed Mar 12 12:22:23 2003

From gceb@comm.gsfc.nasa.gov Wed Mar 12 12:22:22 2003

Return-Path: <gceb@comm.gsfc.nasa.gov>

Briefing message for Customer/WDISC data flow.

1. A Customer /WDISC data flow is scheduled on March 13, 2003 from 1500Z TO 1700Z.

2. Participants:

NIC, Customer MOC, NISN, WSGT/STGT

3. Objectives:

The test objective is to verify command, telemetry data flow, and
Command switch/failover capability between the SN WDISC and Customer MOC.

4. Test description:

- A. NIC will configure WDISC to play back a Customer telemetry data file to the Customer MOC.
- B. Customer MOC will receive, process, and verify telemetry data quality.
- C. Customer MOC will send command data to the WDISC.
- D. SN will verify receipt of the command data at WDISC.
- E. Customer MOC will exercise the command switch/failover functions.

5. Timeline:

DAY/START-STOP	ACTIVITY
Mar 13, 2003	
072/1500-1510Z	COMM activation and briefing
072/1510-1650Z	Command and telemetry data flow
072/1650-1700Z	Debriefing

6. NIC requirements:

- A. NIC will configure WDISC systems and support testing
as specified in the test description.

7. Customer MOC requirements:

- B. Receive, process, and verify telemetry data quality.
- C. Send command data to the WDISC.
- D. Exercise the command switch/failover capability.

8. WSGT/STGT requirements:

- A. The WDISC test team will be using WSGT/STGT PTP 1 and 2.
- B. WSGT/STGT personnel are not required to support this test.

Figure 3-1. MOC Data Flow with Manual Mode Scheduling Briefing Message Sample

9. NISN requirements:

A. Voice: NIC, Customer MOC (01703)

B. Data:

Telemetry data transmission between WSC and Customer MOC will be via WDISC and IONET

10. Points of contact:

3.2 Notification to Customer of WDISC Operational Support

3.2.1 Purpose

This procedure discussed the notification of WDISC operational support to customers.

3.2.2 Participants

- a. WDISC Development Team.
- b. Project MOC.
- c. MOC Flight Operations Manager.
- d. WDISC SERB.
- e. WSC Ops.

3.2.3 Procedure

3.2.3.1 General

Once project/customer desktops have been tested and verified ready for operations by the desktop developer, and tester, the MOC is notified that WDISC is ready for operational support.

3.2.3.2 Notification of Operational WDISC System

The WDISC Development Team notifies the customer MOC via e-mail that the WDISC system is ready to support their mission. See Figure 3-2, Notification to MOC of Operational WDISC System.

Date:

To: Project MOC, Project Flight Operations Manager, WSC Ops, WDISC SERB,
MCE

From WDISC Development Team

Subject: Notification of WDISC System Ready for Mission Operations Support

This memo serves as notification that the WDISC system is now ready to support the XXX mission.

Figure 3-2. Notification to MOC of Operational WDISC System

3.3 Contingency Fallback to Non-automated Mode

3.3.1 Purpose

This procedure directs the WSC Scheduler to two procedures in the event the automated scheduling system fails.

3.3.2 Participant

WSC Scheduler.

3.3.3 Procedure

In the event the automated scheduling systems fails, the WSC Scheduler follows the Scheduling Client procedure found in Section 4, as well as the Transfer of Developed Desktops and Data Sets to WSC procedure in Section 2.

Section 4. Tools

4.1 Scheduling Client

4.1.1 Purpose

This procedure describes the method to troubleshoot, add and delete an event using the WDISC Monitor NT.

4.1.2 Participants

- a. WDISC Development Team.
- b. WSC WDISC Operator.

4.1.3 Procedure

4.1.3.1 General

This procedure enables the WSC WDISC operator to use the Scheduling Client as an alternate method to troubleshoot, add, or delete an event when normal operations are unable to due to anomalies. The Scheduling Client is a software tool that connects to the Scheduler Server. The Scheduler Server executes the add/delete requests and transmits the information to the board servers. Access to the WDISC systems is through the NIC NT, TOCC NT, and locally at the PTPs. See figure 4-1.

4.1.3.2 Accessing Scheduling Client

The following steps access the Scheduling Client to add or delete an event.

- a. Go to My Computer, select Drive C.
- b. Select ptp_user folder.
- c. Select SchedClient folder.
- d. Select PTPSchedClient.exe.

4.1.3.3 Add or Delete an Event

- a. Select PTPSchedClient.exe.
- b. The Schedule Client display appears.
- c. Enter IP address of PTP.
- d. Select from the 12-item Command menu, see Figure 4-2.

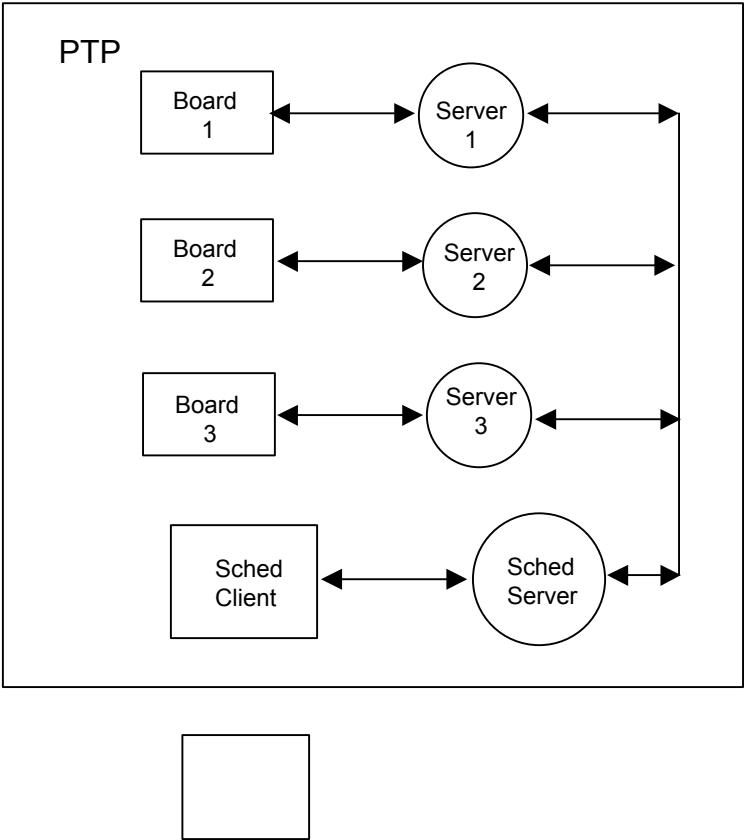

Figure 4-1. PTP Block Diagram

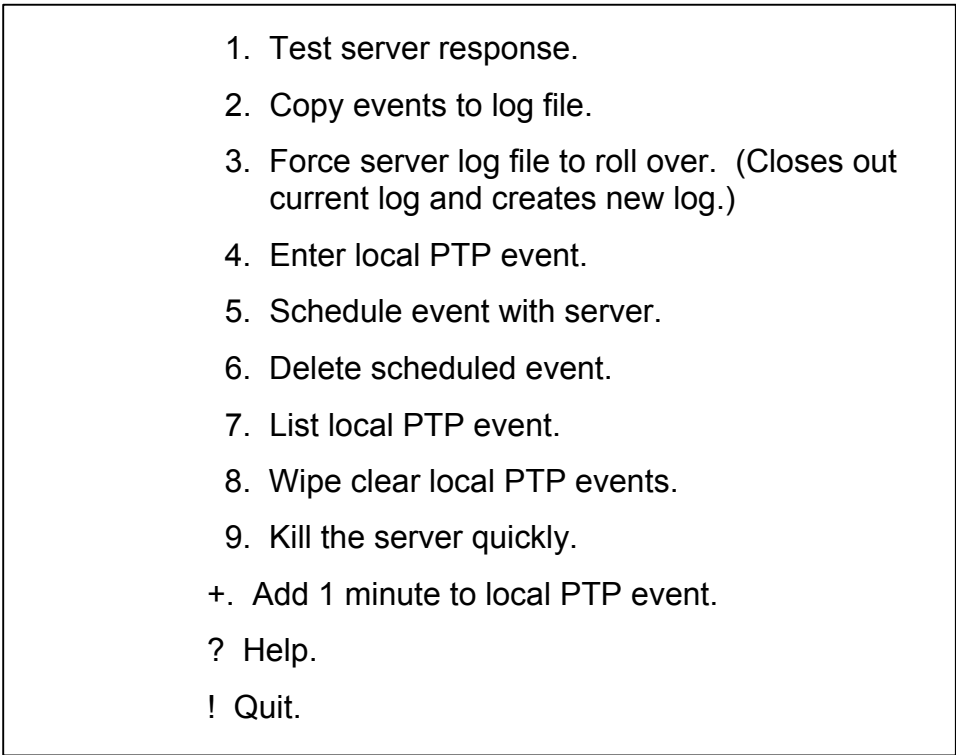

- 
1. Test server response.
 2. Copy events to log file.
 3. Force server log file to roll over. (Closes out current log and creates new log.)
 4. Enter local PTP event.
 5. Schedule event with server.
 6. Delete scheduled event.
 7. List local PTP event.
 8. Wipe clear local PTP events.
 9. Kill the server quickly.
 - + Add 1 minute to local PTP event.
 - ? Help.
 - ! Quit.

Figure 4-2. 12 Item Command Menu

4.1.3.3.1 To Add or Enter a PTP Event:

- a. Select #4 on Command menu.
- b. Enter event slot number (number 1-9).
- c. Enter port number for server on which event is to be scheduled (ex. 4000, 4001, 4002).
- d. Enter desktop name.
- e. Enter start and stop times, 2002/HH:MM:SS
- f. Menu prompts, Is there Forward Service? Y/N. Enter N.
- g. Select #5 on 12 item menu.
- h. Type in PTP Event number 1-9.
- i. Server responds, "OK".

- j. Verify event has been scheduled.
 - 1. To verify, go to SchedServer display and select Logs folder. Refer to paragraph 4.1.3.4 to access the SchedServer folder.
 - 2. If event has been scheduled, the display will read, “New Event Scheduled: OK”.

4.1.3.3.2 To Delete a PTP Event

- a. Select #6 on 12 item menu.
- b. Delete PTP event.
- c. Verify by going to SchedServer display. Click on Logs folder.
- d. Look for “Info: Event deleted OK”.
- e. Then have to delete event out of SchedClient.
- f. Select #8 on 12 item Command menu to wipe SchedClient clean.

4.1.3.4 Troubleshooting

- a. To troubleshoot, view the PTP Events List:
 - 1. Go to My Computer, select C drive.
 - 2. Select ptp_user folder.
 - 3. Select SchedServer folder.
 - 4. Select Logs folder.
 - 5. Open a log file.
- b. This log displays events 2 weeks in the past, and events 3 days in the future.

Section 5. Maintenance

5.1 Updating Configuration of Playback Data Clean Up Files

5.1.1 Purpose

This procedure details the steps to update the configuration of playback data clean-up files.

5.1.2 Participants

- a. WDISC Desktop Developer.
- b. WSC DBA.

5.1.3 Procedure

5.1.3.1 General

The playback data clean up file resident on each PTP is maintained by the WDISC Desktop Developer. The file is an MS-DOS batch file identified as d:\ats\del50hrs.bat. The file is periodically executed on each PTP to delete old telemetry data. This file will need updating for a new customer, a customer whose directory name changes, or a customer who needs to change the time limit for retaining telemetry data on the PTPs.

5.1.3.2 Updating the File

- a. The WDISC Desktop Developer connects from GSFC to each PTP via remote control and directly edits the file with a text editor such as MS WordPad. The file consists of individual lines that apply to data for each customer, such as this line for the FUSE customer:

```
c:\ntreskit\perl\perl c:\ptp_user\perl\DeleteOldFiles.pl 50  
d:\inetpub\ftproot\fuse
```

- b. In this example, the line will execute a Perl script called DeleteOldFiles.pl and delete telemetry files in directory d:\inetpub\ftproot\fuse that were opened 50 hours or more in the past. The telemetry files to be deleted will have a name that indicates what time (down to microseconds) they were opened in DOY-HH-MM-SS.mmm.uuu.rec format, such as:

```
300-03-43-58.608.557.rec
```

- c. The WDISC Desktop Developer informs the customer or the customer's representative of the completion of the update.

- d. An alternative procedure is for the WDISC Desktop Developer to email the file update information (add new mission or delete old mission data) to the WDISC DBA for updating directly on the PTP's. The WSC DBA would then inform the WDISC Desktop Developer of completion of the update.

5.2 Removal of Obsolete/Test MOC Desktops

5.2.1 Purpose

This procedure describes the method for removing obsolete/test MOC desktops.

5.2.2 Participants

- a. WDISC:
 - 1. SERB.
 - 2. Desktop Developer.
- b. Project MOC.
- c. WSC DBA.

5.2.3 Procedure

5.2.3.1 Notification to MOC

Prior to removing project desktops that have been determined to be obsolete from the PTPs, the WDISC SERB/Desktop Developer notifies the Project MOC via e-mail with a list of desktops slated for removal. See Figure 5-1 for request message.

5.2.3.2 Deletion of Desktops and Notification

Upon receipt of Project MOC response to remove desktops, the WDISC Desktop Developer moves the old files to the Obsolete folder and notifies via e-mail, the WDISC SERB and WSC DBA. The WSC DBA removes any NCCDS reference to obsolete desktops.

Memo to MOC

Date:
To: Project MOC
From: WDISC SERB, WDISC Desktop Developer
Subject: Removal of Obsolete WDISC Desktops

The following desktops have been determined to be no longer required for operations and therefore are obsolete. Please review the listed desktops and respond using the form below to concur or not concur.

- 1.
- 2.
- 3.
- 4.

MOC Response:

Date:
To: WDISC SERB, WDISC Desktop Developer
From: (Project) MOC
Subject: Concurrence/Non concurrence to obsolete WDISC Desktops

The following desktops have been reviewed and are marked for removal or retention.

- | | Desktop | Remove | Retain |
|----|---------|--------|--------|
| 1. | | | |
| 2. | | | |
| 3. | | | |
| 4. | | | |

Figure 5-1. Notification of Obsolete Desktop Removal and Response Memo

5.3 Creating Log-on Account to the Monitor NT

5.3.1 Purpose

This procedure details the steps taken to create an account to log onto the Monitor NT.

5.3.2 Participant

WDISC Administrator.

5.3.3 Procedure

5.3.3.1 Creating a Log-on Account for Monitor NT

The following steps are taken to create a log-on account:

- a. Log on as an administrator.
- b. To create an account, bring up User Manager display.
- c. Create New User.
- d. Fill out information blanks on display.
- e. Put information into "pa" group by clicking on Groups button and select "pa".

5.4 Termination of Customer Support

5.4.1 Purpose

This procedure details the steps taken for termination of WDISC Customer Support.

5.4.2 Participants

- a. WDISC SERB.
- b. WDISC Desktop Developer.
- c. Project MOC.
- d. WDISC Desktop Tester.
- e. WSC DBA.

5.4.3 Procedure

Upon termination of WDISC support, the WDISC SERB also notifies via e-mail, the WDISC Desktop Developer that desktop files can be removed from WDISC PTPs. The WDISC SERB also notifies, via e-mail, the WSC DBA that mapping tables can be removed. The WDISC Desktop Tester notifies the Project MOC of the removals.

5.5 Periodic Desktop Verification Procedure

5.5.1 Purpose

This procedure provides a method of verifying that all desktops required to be present on the WDISC computers are present and have the same contents as the Master desktop set.

5.5.2 Participants

WDISC Operator.

5.5.3 Procedure

5.5.3.1 General

The verification process is performed by maintaining a Master set of desktops and periodically capturing and comparing it against the working desktop set from each WDISC computer. This is accomplished using a batch file that produces an analysis file showing any differences between the Master and Operational desktops. An operator/analyst must then restore any corrupted files from the Master desktop set.

5.5.3.2 Batch File Preparation

- a. If the following files are present then bypass procedure in paragraph 5.5.3.3.
 1. Create a file named "MD5_record_all.bat" containing entries from section 5.5.3.5a.
 2. Create a file named "MD5_set_reference_all.bat" containing entries from section 5.5.3.5b.
 3. Create a file named "MD5_compare_all.bat" containing entries from section 5.5.3.5c.

5.5.3.3 Database Capture Procedure

- a. Use the Radmin program to connect to the WSGTPTP1 WDISC computer.
- b. Select the "c:\ptp_user\desktops" folder and use the Winzip application to place a copy of the desktops (DTP extension) into a file called WSGTPTP1_yymmdd.zip (where yy = year, mm = month, and dd = day).
- c. Perform steps 5.5.3.3a and 5.5.3.3.b for WSGTPTP2 through WSGTPTP4 and STGTPTP1 through STGTPTP4.
- d. Move the zip files to the PC on which the desktop verification procedure will be performed.

5.5.3.4 Verification Procedure

- a. Place/Verify that program “Md5sums.exe” is in the root directory (C:\).
- b. Create a folder path called
“C:\Ptp_work\WSC\WDISC\OfficialDesktops\WSGTptp1\”.

NOTE

If the folder is present, place the previous zip file into the
“Obsolete” folder and delete all of the desktop (DTP) files.

- c. Place the WSGTPTP1_yymmdd.zip file into this folder and unzip all of the desktops.
- d. Perform steps 5.5.3.4a and 5.5.3.4b for WSGTPTP2 through WSGTPTP4 and STGTPTP1 through STGTPTP4.

NOTE

Omit steps 5.5.3.4e and 5.5.3.4f if the current Master
desktops are already resident.

- e. Create folder paths called “C:\Ptp_work\WSC\WDISC\OfficialDesktops\ptp1\”
and “C:\Ptp_work\WSC\WDISC\OfficialDesktops\ptp2\”.
- f. Copy the Master ptp1 and ptp2 desktops into their respective folders.
- g. Desktop file evaluation
 1. If this IS an initial configuration:
 - (a) Run the “MD5_record_all.bat” file.
This file generates a set of CRC values for all master and captured
desktop data files.
 - (b) Run the “MD5_set_reference_all.bat” file.
This file copies the recorded desktop data files for use as a baseline
reference during the comparison process.
 - (c) Run the “MD5_compare_all.bat” file.
This file compares all master and captured desktop data files against the
reference data CRC values.
 2. If this is NOT an initial configuration:
 - (a) Run the “MD5_set_reference_all.bat” file.
This copies previously recorded desktop data files for use as a baseline
reference during the comparison process.

- (b) Run the “MD5_record_all.bat” file.

This file generates a new set of CRC values for all master and captured desktop data files.

- (c) Run the “MD5_compare_all.bat” file.

This file compares all master and captured desktop data files against the reference data CRC values.

3. Display information contained in the Diff_WDISC_xxx.txt files using a text editor (double clicking on the txt file). See reference paragraph 5.4.3.5d for the display structure and interpretation.
4. If no anomalies are noted then the verification process is complete.

5.5.3.5 Reference: Batch File Contents

This reference section contains listings for the creation of the three batch files.

a. MD5_record_all.bat

```

```

d. **Comparison recording in Diff_WDISC_xxx.txt files**

1. Difference example:

Comparing files Md5sums_Master_PTP1.md5 and MD5_REFERENCE_STGT_PTP1.MD5

***** Md5sums_Master_PTP1.md5

cnof2PB.DTP	f0fe7ba05262b2287236956edcb5ca45
-------------	----------------------------------

EO1Bbd1.dtp	1f94a276fe04495b66b39fa55e1aab82
-------------	----------------------------------

***** MD5_REFERENCE_STGT_PTP1.MD5

cnof2PB.DTP	f0fe7ba05262b2287236956edcb5ca45
-------------	----------------------------------

cnofstest.dtp	fe3f3f59d9848b218b5a1f88721feb3f
---------------	----------------------------------

EO1Bbd1.dtp	1f94a276fe04495b66b39fa55e1aab82
-------------	----------------------------------

2. Content mismatch:

(a) The file comparison utility program (fc.exe) shows at least the last entry that matched between the two MD5 data files and the next line that again matches between the two.

(b) If other lines are present between the two, such as the cnofstest.dtp line, then a difference exists between the directory contents. In this

case there is an extra file in the reference STGT PTP1 file that is not present in the Master PTP1 file.

- (c) If the file had been present in both directories but one had been modified then the same desktop name would have been seen but a difference would be present in the CRC value (long number).
- (d) At this point an investigation of which desktop is in error should begin.

Appendix A. Abbreviations and Acronyms

Acronym	Definition
BM	Briefing Message
CMD	Command
CNOFS	Communications/Navigation Outage Forecasting System
CTV	Compatibility Test Van
DBA	Data Base Administrator
DBCN	Data Base Change Notice

WFF	Wallops Flight Facility
WSGT	White Sands Ground Terminal (WSC)

Appendix B. WDISC Desktop Configurations

B.1 Customer Desktop Configurations

Appendix B contains the following customer desktop configurations:

- a. Communications/Navigation Outage Forecasting System (CNOFS).
- b. New Millennium Program Earth Orbiter –1 (NMP/EO-1).
- c. Far Ultraviolet Spectroscopic Explorer (FUSE).
- d. Galaxy Evolution Explorer (GALEX).
- e. Gravity Probe-B (GP-B).
- f. Landsat-7.
- g. Long Duration Balloon (LDB).
- h. Solar Radiation and Climate Experiment (SORCE).
- i. Swift.
- j. Thermosphere Ionosphere Mesosphere Energetics and Dynamics (TIMED).
- k. Ultra Long Duration Balloon (ULDB).
- l. Generic Playback.

CNOFS Desktop

(Communications/Navigation Outage Forecasting System) OPEN IONet
Desktop Name: CNOF1bd1.DTP, CNOF1bd2.DTP, CNOF1bd3.DTP (ptp1)
CNOF2bd1.DTP, CNOF2bd2.DTP, CNOF2bd3.DTP (ptp 2)

Figure B-1. Communications/Navigation Outage Forecasting System Desktop

Notes:

Manual playback procedure:

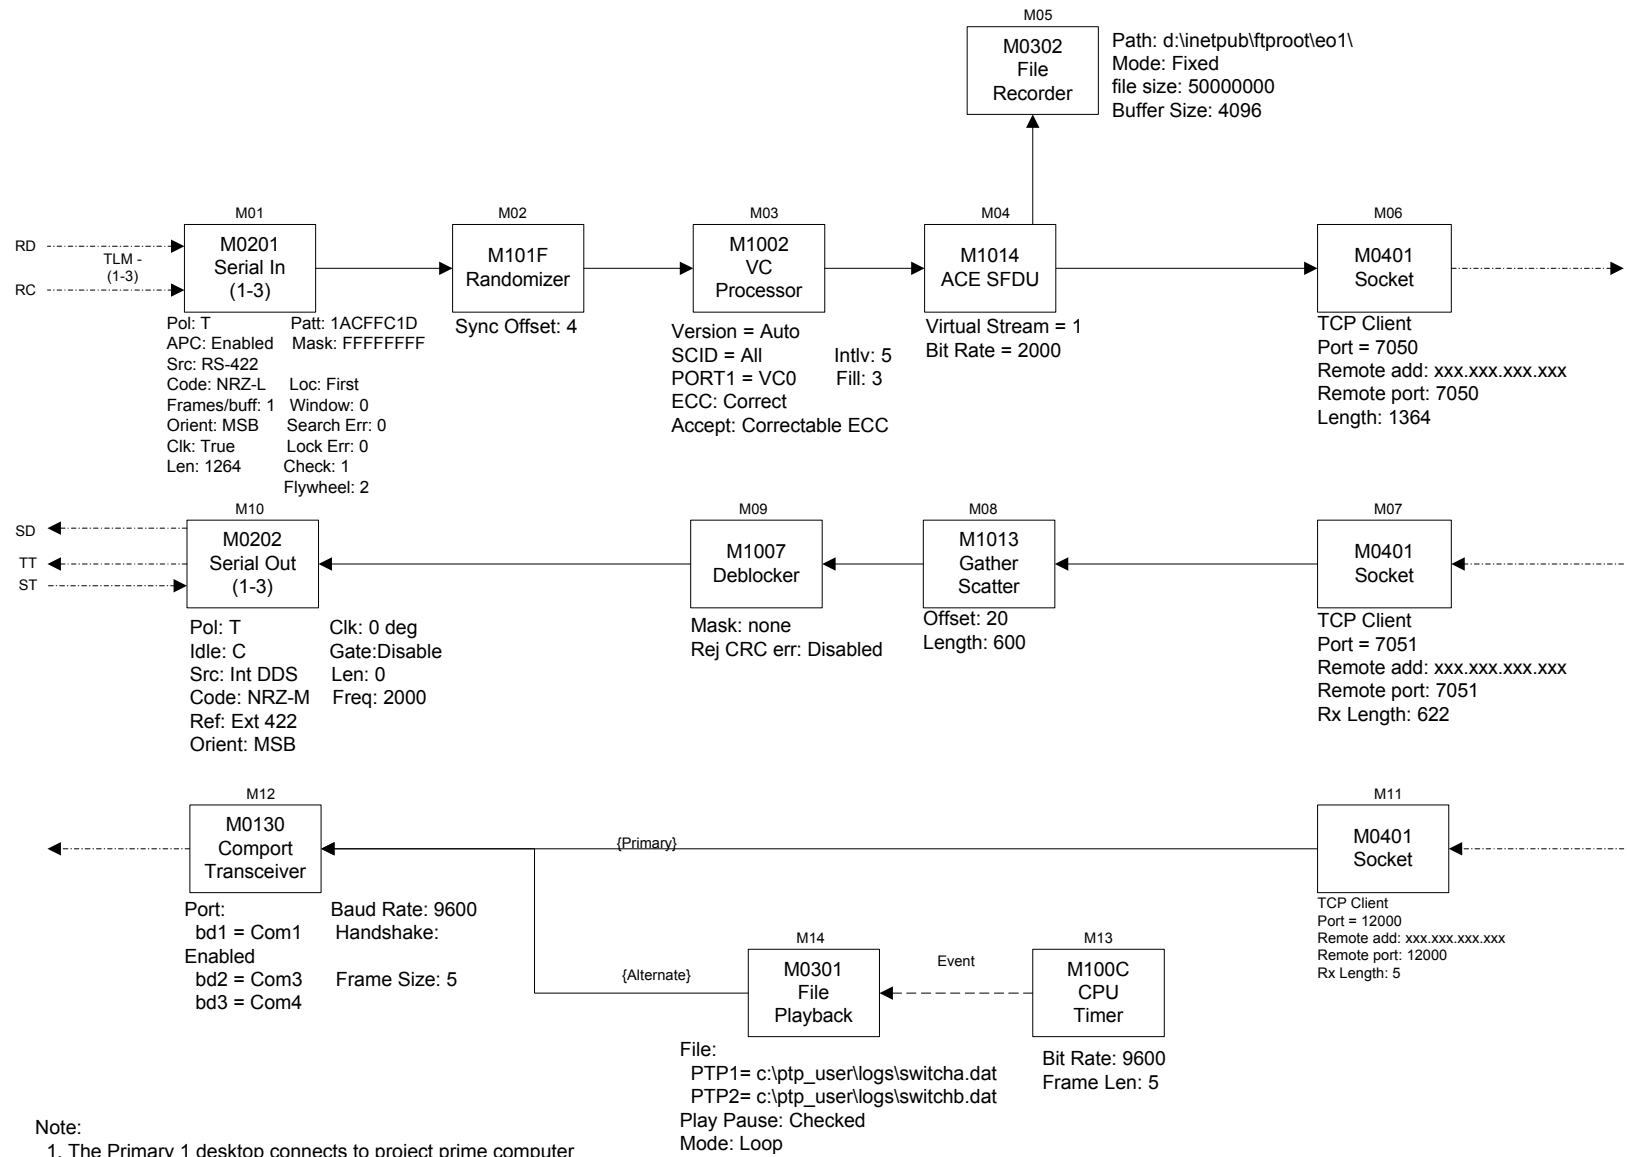

1. Copy the recorded file (<timestamp>.rec) and rename the copied file to playback.rec
2. Load the CNOFpb desktop.
3. Enable the desktop (all streams) when the MOCC is ready to receive playback data.

CNOFS Playback Desktop

SUPIDEN: xxxx, IONET: OPEN

99-0078

Figure B-5. Earth Orbiter 1 (EO1) Backup Desktop

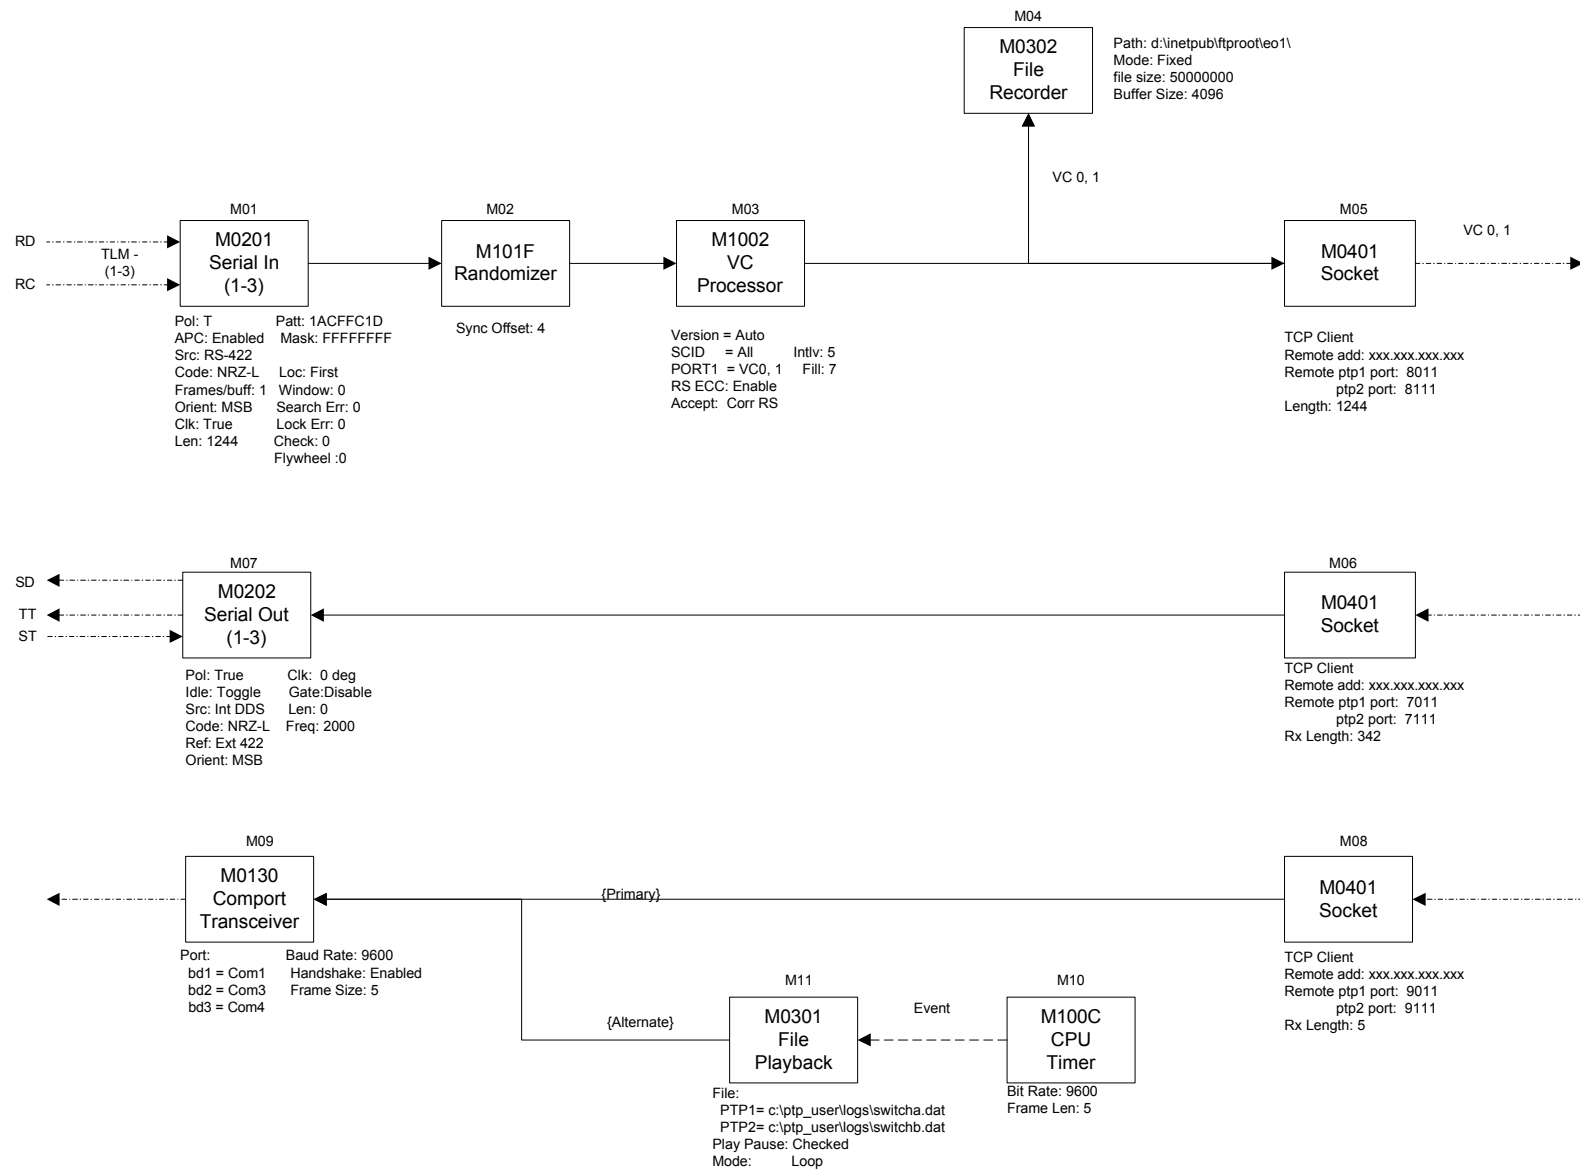

Notes:

1. The MOCC is unable to determine the IP address of the connecting machine and therefore the same port used on different machines will cause confusion. Because of this different port numbers have been used on PTP1 and PTP2.
2. Because the scheduler currently loads the same desktop name onto PTP1 and PTP2, a different port configuration is used in PTP1 and PTP2, but, the desktops have the same name. Configuration control must ascertain that only PTP1 desktops are loaded on PTP1 and the same applies to PTP2.

FUSE Desktop (wdisc)
 SUPIDEN= 5657, IONET: OPEN
 Drawing: DtW_FUSE.vsd Desktop Name: FUSEbd1.DTP, FUSEbd2.DTP, FUSEbd3.DTP

Locating & loading a file name for playback:

1. Start the PcAnywhere application.
2. Select: path "d:\inetpub\ftproot\ls7".
3. Single Click on the file name to be played back (highlights).
4. Hold down the 'ctrl' key and press the 'c' key (to copy the file name to the PTP clipboard).
5. Select the Copy clipboard button on the button bar.
6. Choose copy from the host to the local machine.
7. Switch to the local console display.
5. In the Playback module File window:
 - a. Highlight the "DDD-HH-MM-SS.mmm.uuu.rec" characters
 - b. With the pointer over the highlighted area, right mouse click and select paste.
 - c. Select the 'Send' button
- 6a. Enable all streams to begin the playback (at project request).
- 6b. Alternatively:
 - a. Enable the socket module (M03) and verify that a socket connection is present.
 - b. Enable the M01 and M02 modules to begin data playback.

Figure B-19. SORCE Desktop

Locating & loading a file name for playback:

1. Start the PcAnywhere application.
2. Run the NTExplorer and select: path "d:\inetpub\ftproot\sorce".
3. Single Click on the file name to be played back (to highlight).
4. Hold down the 'ctrl' key and press the 'c' key (to copy the file name to the PTP clipboard).
5. Hold down the 'ctrl' key and press the 'v' key (to save a copy of the file).
6. Single Click twice on the 'copy of ...' file (to highlight).
7. Type 'playback.rec' over the file name to rename it.
8. Schedule a playback on the ptp containing the renamed data.

Notes:

Manual playback procedure:

1. Copy the recorded file (<timestamp>.rec) and rename the copied file to playback.rec
2. Load the SORCEpb desktop.
3. Enable the desktop (all streams) when the MOCC is ready to receive playback data.

Appendix C. Customer Data Sheets

C.1

This appendix contains data sheets for the following WDISC customers:

- a. Communications/Navigation Outage Forecasting System (CNOFS).
- b. New Millennium Program Earth Orbiter –1 (NMP/EO-1).
- c. Far Ultraviolet Spectroscopic Explorer (FUSE).
- d. Galaxy Evolution Explorer (GALEX).
- e. Gravity Probe-B (GP-B).
- f. Landsat-7.
- g. Long Duration Balloon (LDB).
- h. Solar Radiation and Climate Experiment (SORCE).
- i. Swift.
- j. Thermosphere Ionosphere Mesosphere Energetics and Dynamics (TIMED).
- k. Ultra Long Duration Balloon (ULDB).
